

M10C E&R Ls 1: Perfect Squares & Square Roots

1. Define Perfect Square
2. Determine if a Number is a Perfect Square
3. Define Square Root
4. Evaluate and Estimate Square Roots

Define Perfect Square

What is the side length of each square?

Perfect Square: a number that has two equal integer factors.

eg. 4 is a perfect square

Think About it:
Are 2 and 2 the only equal factors of 4?

$$(-2)(-2) = 4$$

Determine if a # is Perfect Square

Example: Determine if 256 is a perfect square.

$$\begin{array}{r} 2 \overline{)256} \\ 2 \overline{)128} \\ 2 \overline{)64} \\ 2 \overline{)32} \\ 2 \overline{)16} \\ 2 \overline{)8} \\ 2 \overline{)4} \\ 2 \overline{)2} \\ 1 \end{array}$$

$$2 \cdot 2 \cdot 2 \cdot 2 \cdot 2 \cdot 2 \cdot 2 \cdot 2 = 256$$

$$16 \cdot 16 = 256$$

$\therefore 256$ is a perfect square.

Skill

Use prime factorization.
If it is possible to make two equal groups out of the prime factors then the # is a perfect square.

Practice: Determine if the following numbers are perfect squares.

- a) 196 ✓ b) 729 ✓ c) 512 ✗

Define Square Root

What is the side length of each square?

Square Root: one of two equal factors of a number.

eg. $9 = 3 \cdot 3$ therefore $\sqrt{9} = 3$

eg. $13 = \sqrt{13} \cdot \sqrt{13}$

Exact vs.
Approximate?

Investigate Square Roots and Exponents

Evaluate the Area of each square.
(hint: exponent laws)

Is there another way to write the dimensions of each square of the same area?

$$A=3$$

$$3^{\frac{1}{2}}$$

$$3^{\frac{1}{2}}$$

$$\begin{aligned} A &= 3^{\frac{1}{2}} \cdot 3^{\frac{1}{2}} \\ &= 3^{\frac{1}{2} + \frac{1}{2}} \\ &= 3 \end{aligned}$$

$$A=3$$

$$\sqrt{3}$$

$$\sqrt{3}$$

$$3^{\frac{1}{2}} = \sqrt{3}$$

$$A=9$$

$$9^{\frac{1}{2}}$$

$$9^{\frac{1}{2}}$$

$$\begin{aligned} A &= 9^{\frac{1}{2}} \cdot 9^{\frac{1}{2}} \\ &= 9^{\frac{1}{2} + \frac{1}{2}} \\ &= 9 \end{aligned}$$

$$A=9$$

$$\sqrt{9}$$

$$\sqrt{9}$$

$$9^{\frac{1}{2}} = \sqrt{9} = 3$$

Practice: Square Roots in Exponent Form

Evaluate the following:

$$4^{\frac{1}{2}} = \sqrt{4} = 2$$

$$25^{\frac{1}{2}} = \sqrt{25} = 5$$

$$64^{\frac{1}{2}} = 8$$

$$9^{\frac{1}{2}} = \sqrt{9} = 3$$

$$36^{\frac{1}{2}} = 6$$

$$81^{\frac{1}{2}} = 9$$

$$16^{\frac{1}{2}} = \sqrt{16} = 4$$

$$49^{\frac{1}{2}} = 7$$

$$100^{\frac{1}{2}} = 10$$

Evaluate Square Roots

We can use our knowledge of Perfect Squares to help us evaluate Square Roots.

Perfect Squares: 1, 4, 9, 16, 25, 36, 49, 64, 81, 100, 121, 144, 169, 196, 225, ...
(list as many as you can)

Evaluate the following:

$$a) \sqrt{169} = 13$$

$$b) \frac{144^{\frac{1}{2}}}{\sqrt{36}} = \frac{\sqrt{144}}{\sqrt{36}} = \frac{12}{6} = 2$$

$$c) \sqrt{9 \cdot 64} = \sqrt{9} \cdot \sqrt{64} \\ = 3 \cdot 8 \\ = 24$$

$$d) \sqrt{121x^2} = 11x$$

Practice: Text pg. 64: 3

Estimate Square Roots

Examples of estimating square roots of non-perfect squares.

$$\sqrt{50} \approx \boxed{7.1}$$

$$\sqrt{95} \approx \boxed{9.7}$$

Problems Involving Square Roots

Most problems involving square roots relate to area.

e.g. A floor mat for gymnastics is a square with an area of 196 m^2 .
What is its side length? MHR pg. 156

A handwritten diagram of a square. Inside the square, it says $A=196$. To the right of the square, it says $\sqrt{196}$. Below the square, it says $\sqrt{196} = 14$.

Handwritten algebraic solution:
 $A = s^2$
 $\sqrt{196} = \sqrt{s^2}$
 $14 = s$

Practice: Text pg. 64: 12, 13 (No Calculator - Evaluate or Estimate)
